

**MULTIPLE INDICATOR CLUSTER SURVEY 2020**  
*FOLLOW-UP ASSESSMENT OF COVID-19*  
*IMPACT ON CHILDREN IN KYRGYZSTAN*

# **MICS Follow-up Survey on Covid-19 impact on children and women in Kyrgyzstan**

## ***Snapshots of Key Findings***

*February, 2021*

The last Multiple Indicator Cluster Survey (MICS) was carried out in Kyrgyzstan in 2018 by National Statistical Committee (NSC) of Kyrgyz Republic as part of the Global MICS Programme. In the autumn of 2020, the MICS Follow-up Survey, based on a subsample of the MICS-2018 households, had been carried out by NSC to assess Covid-19 impact on children and women in the country. Financial and technical support was provided by the United Nations Children's Fund (UNICEF).

From the conventional MICS, the follow-up survey inherited its modular questionnaire structure and selected modules, wealth quintiles, data on selection probabilities and weights as well as overall approach and data quality control mechanisms. The research team has adapted a special Covid-19 module developed by Global MICS Programme and incorporated it into the questionnaire. Data collection process was conducted through the structured telephone interviews – the process was assisted with the data entry application.

A series of Statistical Snapshots of the main findings of the survey are consolidated in this publication. A general objective of the publication is to facilitate the timely dissemination and use of results from the survey.

For more information on the Global MICS Programme, please go to [mics.unicef.org](https://mics.unicef.org).

# **KEY INDICATORS AND DEFINITIONS**

### INDICATORS AND DEFINITIONS

INDICATOR		Module	Description	Value	Urban	Rural
PE.1	Households affected by COVID -19	PE	Percentage of households in which at least one person has contracted COVID -19 or died, or there has been forced displacement (household members have been resettled or persons came to live), or have not had access to health services, or there has been a decline in income, or dissatisfaction with the online education of children, or a deterioration in emotional health (mood) due to covid19	75,6	79,0	73,1
PE.2	Access to health services during the COVID-19 outbreak	PE	Percentage of households in which at least one person needed medical care for any reason but did not receive it.	20,0	17,4	22,4
PE.3	Not attending school during the COVID outbreak -19	PE	Percentage of households where children aged 5-17 stopped attending school due to covid19 outbreak	97,9	98,4	97,6
PE.4	Negative impact of COVID -19 on household income	PE	Percentage of households with declining incomes reported	50,7	60,9	43,4
DSP.1	Coverage by social assistance during the COVID-19 outbreak	DSP	Percentage of households who received any assistance during the covid19 outbreak	28,1	33,0	24,6
DSP.2	Receiving assistance from government agencies during the COVID-19 outbreak	DSP	Percentage of households that had received assistance from government agencies (Ministry of Labour and Social Protection and Local Self-Government), among all households that received any assistance	79,1	84,5	73,7
DSP.3	Quality of assistance provided during the COVID-19 outbreak	DSP	Percentage of households positively assessing amount and quality of provided assistance	70,0	66,3	73,7
PW.1	Deterioration of emotional state (mood) during the outbreak of COVID-19	PW	Percentage of households with deterioration in emotional state (mood) reported	20,4	24,7	17,2
PW.2	Psychological condition in connection with COVID-19	PW	Percentage of households in which any adult household member felt depressed, discouraged, or hopeless about news, threats, and restrictions related to the COVID-19 outbreak	17,1	21,4	13,9
PW.3	Difficulty sleeping due to the COVID-19 outbreak	PW	Percentage of households with difficulty sleeping due to the COVID-19 outbreak	4,4	5,7	3,5
PW.4	Deteriorating family relationships during the COVID-19 outbreak	PW	Percentage of households with more than usual disputes and disagreements during the coronavirus outbreak	5,5	6,6	4,6

INDICATOR		Module	Description	Value	Urban	Rural
MN.1 a	Antenatal care coverage	MN	Percentage of women age 15-49 years with a live birth in the last 2 years who during the pregnancy of the most recent live birth were attended			
MN.1 b			(a) at least once by skilled health personnel	100,0	100,0	100,0
MN.1 c			(b) at least four times by any provider	89,0	91,5	87,8
			(c) at least eight times by any provider	12,4	22,6	7,5
MN.2	Content of antenatal care	MN	Percentage of women age 15-49 years with a live birth in the last year who during the pregnancy of the most recent live birth, at least once, had blood pressure measured and gave urine and blood samples as part of antenatal care	99,7	100,0	99,6
MN.3	Institutional deliveries	MN	Percentage of women age 15-49 years with a live birth in the last year whose most recent live birth was delivered in a health facility	100,0	100,0	100,0
MN.4	Skilled attendant at delivery	MN	Percentage of women age 15-49 years with a live birth in the last year whose most recent live birth was attended by skilled health personnel	100,0	100,0	100,0
MN.5	Children ever breastfed	MN	Percentage of most recent live-born children to women with a live birth in the last year who were ever breastfed	99,6	98,8	100,0
MN.6	Early initiation of breastfeeding	MN	Percentage of most recent live-born children to women with a live birth in the last year who were put to the breast within one hour of birth	79,3	84,9	76,6
PN.1	Post-partum stay in health facility	PN	Percentage of women age 15-49 years with a live birth in the last year and delivered the most recent live birth in a health facility who stayed in the health facility for 12 hours or more after the delivery	99,8	99,3	100,0
PN.2	Post-natal health check for the newborn	PN	Percentage of women age 15-49 years with a live birth in the last year whose most recent live-born child received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery	99,8	99,3	100,0
PN.3	Post-natal signal care functions <sup>1</sup>	PN	Percentage of women age 15-49 years with a live birth in the last year for whom the most recent live-born child received a least 2 post-natal signal care functions within 2 days of birth	99,8	99,3	100,0
PN.4	Post-natal health check for the mother	PN	Percentage of women age 15-49 years with a live birth in the last year who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery of their most recent live birth	99,6	99,0	99,8

<sup>1</sup> - Signal functions are 1) Checking the cord, 2) Counseling on danger signs, 3) Assessing temperature, 4) Observing/counseling on breastfeeding, and 5) Weighing the baby (where applicable).

Показатель		Модуль	Определение	Всего	Город	Село
UB.1	Attendance to early childhood education	UB	Percentage of children age 36-59 months who are attending an early childhood education programme	7,1	11,0	5,4
EC.1a EC.1b EC.1c	Early stimulation and responsive care	EC	Percentage of children age 24-59 months engaged in four or more activities to provide early stimulation and responsive care in the last 3 days with (a) Any adult household member (b) Father (c) Mother	94,7 12,6 69,6	97,8 10,3 71,1	93,3 13,7 69,0
EC.2	Availability of children's books	EC	Percentage of children under age 5 who have three or more children's books	32,0	37,8	29,5
EC.3	Availability of playthings	EC	Percentage of children under age 5 who play with two or more types of playthings	63,9	56,7	67,1
EC.4	Inadequate supervision	EC	Percentage of children under age 5 left alone or under the supervision of another child younger than 10 years of age for more than one hour at least once in the last week	14,9	9,0	17,5
CB.1	Participation rate in organised learning (adjusted)	CB	Percentage of children in the relevant age group (one year before the official primary school entry age) who are attending an early childhood education programme or primary school	69,9	72,1	68,9
CB.2	School readiness	CB	Percentage of children attending the first grade of primary school who attended early childhood education programme during the previous school year	72,8	80,9	69,3
CB.3	Net intake rate in primary education	CB	Percentage of children of school-entry age who enter the first grade of primary school	93,7	91,4	94,8
CB.4a CB.4b CB.4c	Net attendance ratio (adjusted)	CB	Percentage of children of (a) primary school age currently attending primary or secondary school (b) lower secondary school age currently attending lower secondary school or higher (c) upper secondary school age currently attending upper secondary school or higher	98,2 96,1 88,7	97,4 97,6 88,2	98,6 95,4 89,0
CB.5a CB.5b CB.5c	Out-of-school rate	CB	Percentage of children of (a) primary school age who are not attending early childhood education, primary or lower secondary school (b) lower secondary school age who are not attending primary school, lower or upper secondary school or higher (c) upper secondary school age who are not attending primary school, lower or upper secondary school or higher	0,9 0,3 6,6	0,8 0,2 4,9	0,9 0,4 7,4

INDICATOR		Module	Description	Value	Urban	Rural
CB.6a CB.6b	Gross intake rate to the last grade	CB	Percentage of children of completion age (age appropriate to final grade) attending the last grade (excluding repeaters) (a) Primary school (b) Lower secondary school	106,1 96,6	99,3 111,0	110,1 91,2
CB.8	Effective transition rate to lower secondary school	CB	Percentage of children attending the last grade of primary school during the previous school year who are not repeating the last grade of primary school and in the first grade of lower secondary school during the current school year	100,0	100,0	100,0
CB.9a CB.9b	Over-age for grade	CB	Percentage of students attending in each grade who are 2 or more years older than the official school age for grade (a) Primary school (b) Lower secondary school	0,2 0,1	0,3 0,1	0,1 0,0
AE.1	Distant learning coverage	AE	Percentage of children enrolled in online learning	82,8	91,5	78,7
AE.2	Dissatisfaction with the online learning process	AE	Percentage of children whose parents are not satisfied with the online learning process	78,0	80,1	76,9
AE.3	Coverage of preschool children (5-6 years old) by digital educational programs	AE	Percentage of children using TV lessons broadcasting and / or other digital platforms to support children's education when preschool facilities were closed	92,4	(89,9)	94,2
AE.4	Dissatisfaction with digital educational programs for preschool children (5-6 years old).	AE	Percentage of children whose parents are not satisfied with the quality of TV lessons /learning programs or other digital learning platforms provided to support children's education during the preschool closure period	18,0	(26,2)	12,2
AE.5	Education of children on precautions measures to reduce risk of contracting covid19	AE	Percentage of children whose parents discussed with them precaution measures to reduce the risk of contracting coronavirus	98,4	99,4	98,0
PR.1	Providing homework assistance	PR	Percentage of school children aged 7-17 who are given homework and receive homework assistance at home	71,8	74,1	70,7
PR.2	Homework grading by teachers	PR	Percentage of school children aged 7-17 who are given homework and are graded for completing it	93,0	95,5	91,9

MICS Follow-up Survey on  
Covid-19 impact on children  
and women in Kyrgyzstan

## Sample and Survey Characteristics

Respondents

Households                      Numbers                      Response rate

Children under five

Children 5-17 y

### Survey Implementation

Implementing agency:  
National Statistics  
Committee

Sampling frame:  
2009 Census of Population

Sampling:  
MICS-2018 sub-sample

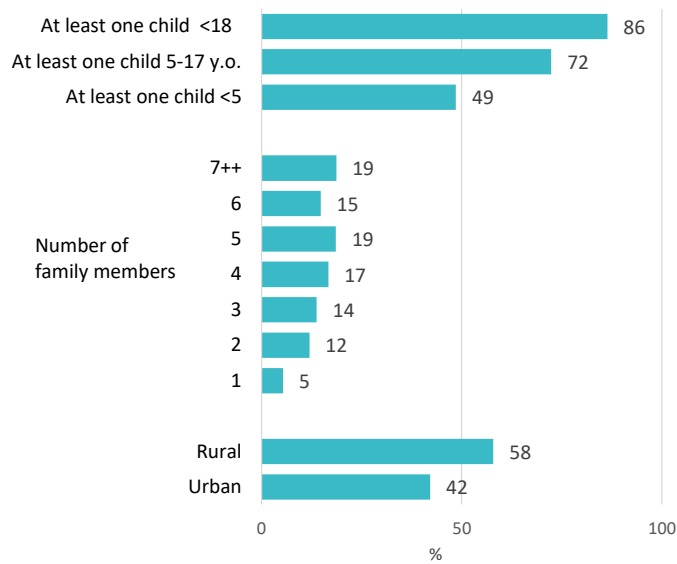

Listing, collection of mobile  
phone numbers and  
informed consent:  
October - November, 2020

Training:  
October, 2020

Data collection:  
November-December, 2020

## Population Characteristics

### Household Composition & Characteristics

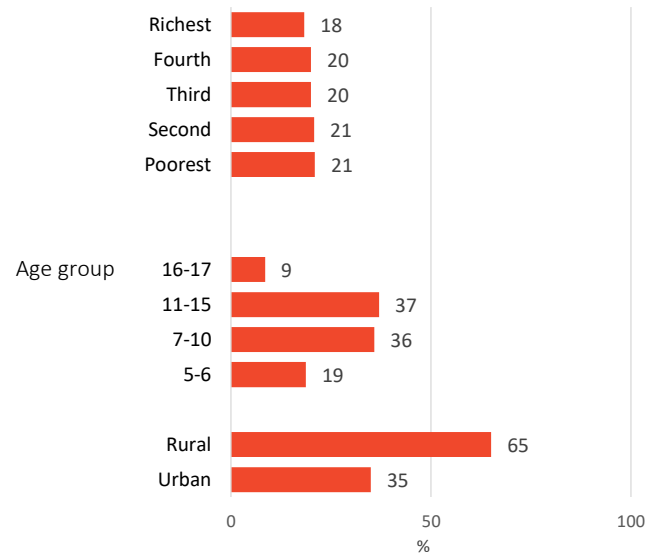

Percent of households by selected characteristics

### Children's profile, <5

### Children's profile, 5-17

Percent distribution of children age 5-17 and under-five by background characteristics

## Regional distribution of population (percent)

Region	Households	Children under 5	Children 5-17
<b>National</b>	<b>100</b>	<b>100</b>	<b>100</b>
Batken	6,5	8,3	7,3
Djalal-Abad	14,9	18,3	15,4
Yssyk-Kul	8,7	7,5	8,8
Naryn	4,8	4,9	5,5
Osh	17,7	24,2	21,2
Talas	3,8	4,9	4,8
Chui	16,1	13,8	15,3
Bishkek c.	23,8	13,7	18,0
Osh c.	3,6	4,3	3,7

## Key Messages

- The response rate for households was nearly 98%, and for mothers and caregivers of children under 5 the response rate was almost 100 per cent.
- More than 86% of households have at least one child aged 0-17.
- About 49% or almost every second household has at least one child under the age of 5.
- About 83% of households consist of three or more people.
- Nearly 46% of children under the age of 5 live in the two poorest wealth quintiles, up 10% more than in the two richest quintiles.
- Two out of three children (under the age of 18) live in rural areas.

Data from this snapshot can be found in table SR.1.1, SR.5.1W, SR.5.2, SR.5.3 and SR.2.3 in the Annex 3.

## 2020

### COVID-19 Impact

MICS Follow-up Survey on Covid-19 impact on children and women in Kyrgyzstan

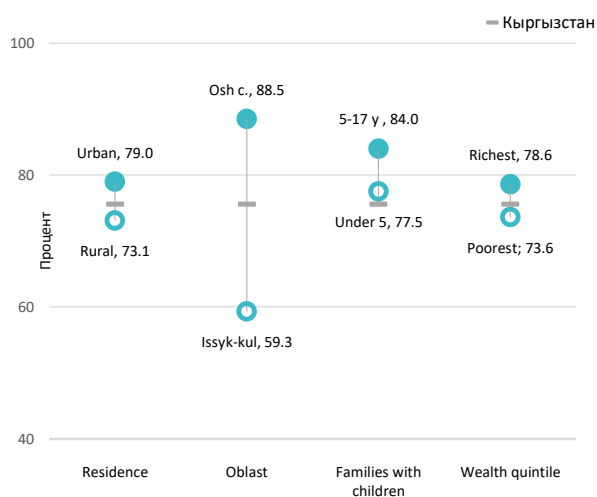

#### COVID-19 impact

Households affected by COVID-19, by domain

Percent of households affected by COVID-19, by impact domain

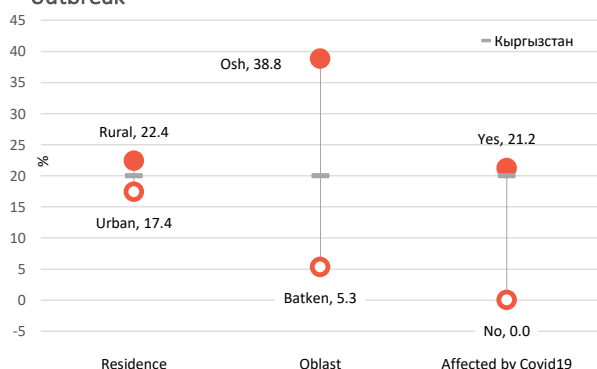

Households affected by COVID-19, by socio-economic characteristics

Percent of households affected by COVID-19, by socio-economic characteristics and area

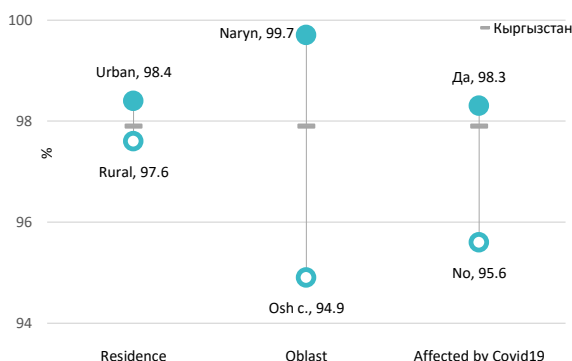

#### Access to health and education services during the COVID-19 outbreak

Access to healthcare services during the COVID-19 outbreak

Proportion of households in which at least one person needed health care for any reason, but did not receive it.

Children not attending educational facilities during COVID-19 outbreak

Proportion of households where children aged 5-17 didn't attend school due to an outbreak

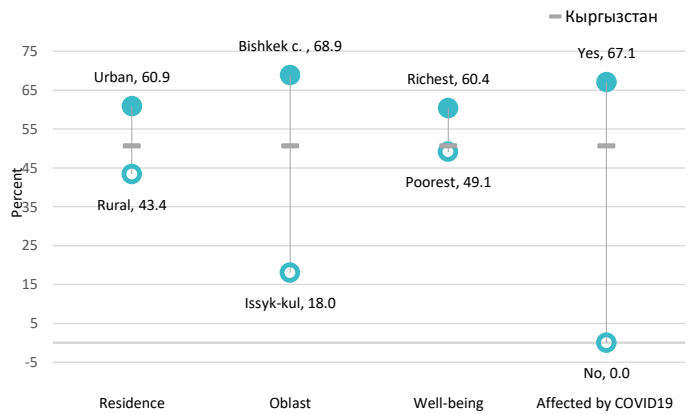

## COVID -19 impact on household incomes

### Change in income

Percent distribution of households by change in income

### Income loss by socio-economic characteristics

Percentage of households with decreased income by socio-economic characteristics

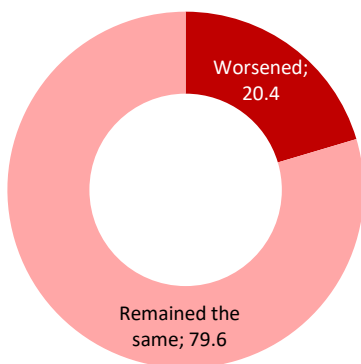

### Reasons of income reduction

Percentage of households with income reduction reported, by factors

## Emotional status during COVID-19

### Changes in emotional status

Percentage of households, by changes in emotional status

### Deterioration in emotional state (mood)

Percentage of households with deterioration in emotional state (mood) reported, by socio-economic characteristics

## Regional distribution

Regions	Households affected by COVID-19 *	Due to					
		forced displacement	Illness or death of family member	no access to health services	Income decrease	dissatisfaction with the online education of children	deterioration in emotional health
<b>National</b>	<b>75,6</b>	<b>14,0</b>	<b>28,6</b>	<b>6,0</b>	<b>50,7</b>	<b>31,8</b>	<b>20,4</b>
Batken	60,9	10,8	13,7	1,9	44,1	25,9	5,9
Djalal-Abad	61,6	17,9	26,9	3,2	28,1	31,5	18,7
Yssyk-Kul	59,3	4,6	29,7	2,9	18,0	34,2	4,4
Naryn	73,1	11,9	11,7	3,1	36,1	51,2	1,9
Osh	82,6	20,3	27,0	10,3	57,8	29,4	23,5
Talas	82,0	15,1	40,2	3,4	38,2	44,4	29,4
Chui	79,3	6,0	21,3	5,3	60,7	33,0	22,4
Bishkek c.	84,0	15,4	42,2	6,4	68,9	27,8	26,9
Osh c.	88,5	24,4	21,3	16,4	68,0	31,0	38,0

\* Households in which at least one person has contracted COVID -19 or died, or there has been forced displacement (household members have been resettled or persons came to live), or have not had access to health services, or there has been a decline in income, or dissatisfaction with the online education of children, or a deterioration in emotional health (mood) due to covid19

## Key Messages

- About 76% of households were affected in some way by Covid-19, 79% of households were affected in urban areas, 73% in rural areas.
- Every second household reported a decrease in income, urban areas - about 61%, in rural areas - 43.4%.
- Due to the Covid-19 outbreak, about 98% of children aged 7-17 stopped attending school, about 83% of children were covered by distance learning. In almost every third household, parents / caregivers are not satisfied with the online learning process.
- In every fifth household (20.4%), at least one family member showed a deterioration in the emotional state. The largest rates are observed in households in the cities of Osh (38%) and Bishkek (27%) and Talas oblast (29%).
- More than 17% of households at least one an adult household member felt "very, extremely" depressed, depressed, or hopeless about the news, threats, and restrictions associated with the coronavirus.
- About 29% of households reported coronavirus infection in at least one person living in the household, even if the symptoms were mild.
- Forced relocation was observed in 14% of households

Data from this snapshot can be found in tables PE6, TC8.1, LN2.1, LN2.3, LN2.4, LN2.7, PR3.3, PR2.1, PR7.1W, PR7.1M, EQ4.1W and EQ4.1M in the Annex 3.

## 2020

### Social protection during pandemic

MICS Follow-up Survey on Covid-19 impact on children and women in Kyrgyzstan

#### Social assistance during the coronavirus outbreak

Percentage of households that received social support / assistance during the coronavirus outbreak by type of source

#### Social assistance by socio-economic characteristics

Percentage of households receiving social support / assistance during the coronavirus outbreak by socio-economic characteristics

## Seeking and receiving social support during the coronavirus outbreak

Applied for social support

Received social support

Percentage of households whose members applied for and received social support during the coronavirus outbreak

## Social support coverage

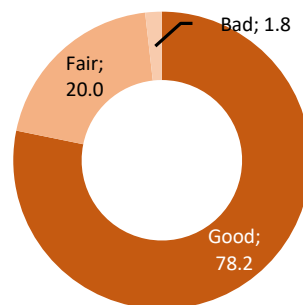

Percentage of households whose members applied for and received social support during the coronavirus outbreak by type of support

## Food kits amount and quality

Amount

Quality

Percentage of households that received food kits during the coronavirus outbreak and rated their size and quality

## Regional distribution

Regions	Applied for social assistance	Received social assistance	Social assistance provided by governmental structures	For food products		
				Received	Amount of food is sufficient	Quality of food is good
<b>National</b>	<b>4,9</b>	<b>28,1</b>	<b>79,1</b>	<b>98,1</b>	<b>70,3</b>	<b>78,2</b>
Batken	2,5	23,3	89,3	99,0	78,5	72,4
Djalal-Abad	,2	30,8	81,5	98,3	90,3	80,5
Yssyk-Kul	7,8	21,9	79,5	95,0	80,0	74,8
Naryn	,2	33,0	71,9	94,4	68,8	91,5
Osh	1,6	18,0	77,8	95,9	63,0	77,4
Talas	6,3	25,8	81,2	(92,2)	(60,1)	(58,5)
Chui	9,2	23,6	45,0	99,4	77,8	81,4
Bishkek c.	7,0	36,5	91,1	99,8	54,4	78,9
Osh c.	8,4	51,8	84,9	99,5	82,1	70,6

( ) – based on 25-49 unweighted cases.

## Key messages

- About 5% of households applied for social support during the coronavirus outbreak, the bulk of appeals were directed to local governments.
- More than 28% of households received social support during the coronavirus outbreak, in cities - every third household, in rural areas - every fourth household.
- At the same time, the coverage of social support for households in the two poorest quintiles is lower than in the two richest quintiles.
- Among the households that received social support, more than 79% received it from government structures.
- The main assistance to households was provided in the form of a food kits.
- Among households that received a food set, more than 70% assessed its size as sufficient, and more than 78% noted the good quality of the food.

Data from this snapshot can be found in tables DSP1, DSP2 and DSP3 in the Annex 3.

# Kyrgyzstan

## 2020

### Emotional state during the COVID-19 outbreak

MICS Follow-up Survey on Covid-19 impact on children and women in Kyrgyzstan

#### Deterioration of emotional state (mood) during the outbreak of COVID-19

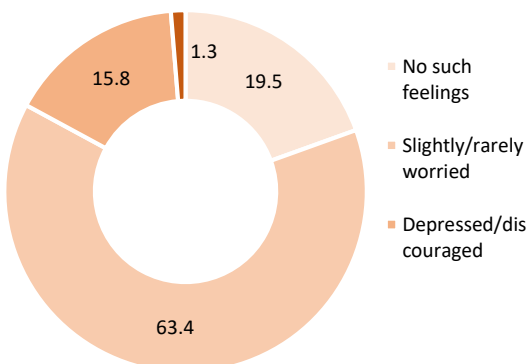

Percentage of households experiencing a deterioration in emotional state (mood) during the COVID-19 outbreak by type

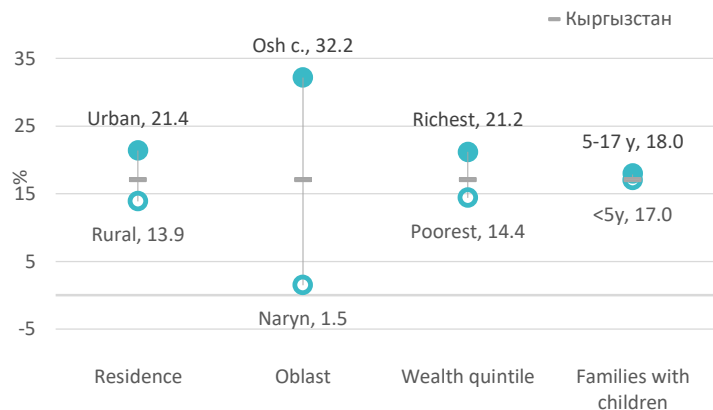

Percentage of households with a deterioration in emotional state (mood) during the COVID-19 outbreak by main characteristics

#### Psychological condition in connection with COVID-19

Percentage of households in which an adult household member felt depressed, discouraged, or hopeless due to COVID-19 news, threats, and psychological constraints

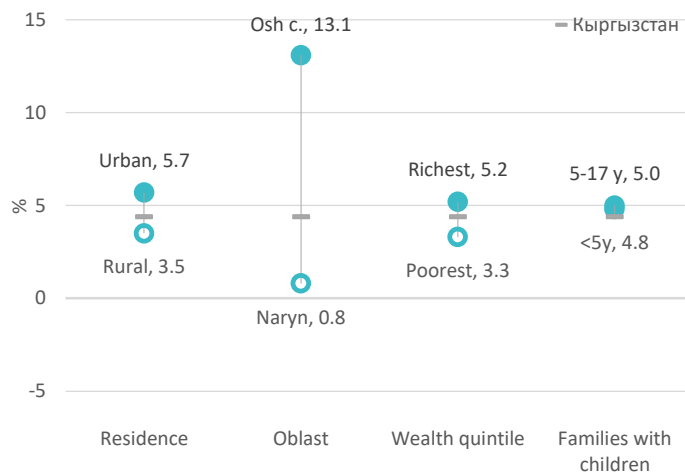

Percentage of households in which an adult household member felt depressed, discouraged, or hopeless by socio-economic characteristics

## Difficulty sleeping during COVID-19 outbreak

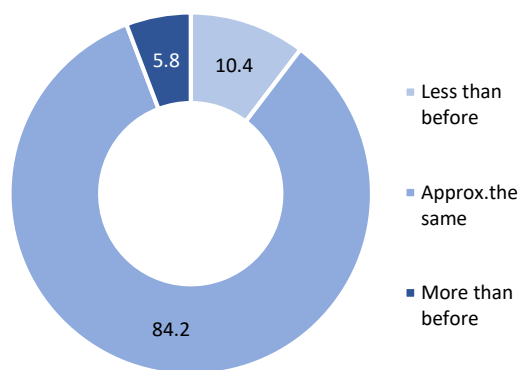

Percentage of households with an adult household member who experienced difficulty sleeping during the COVID-19 outbreak, by severity

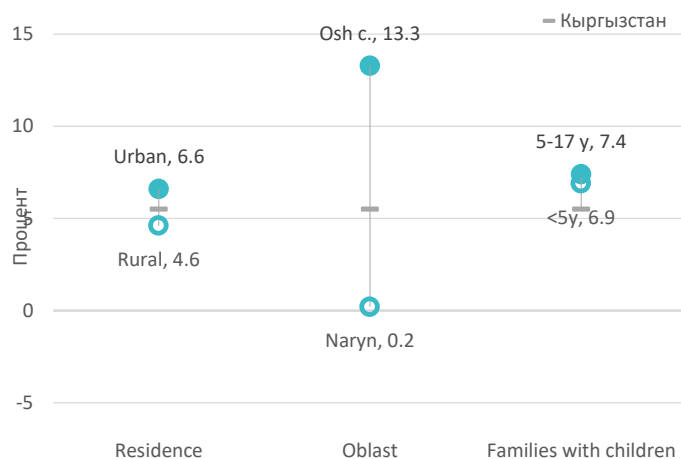

Percentage of households with an adult household member who experienced difficulty sleeping during the COVID-19 outbreak, by socio-economic characteristics

## Family relationships during the COVID-19 outbreak

Percentage of households with more than usual disputes or disagreements with other family members during the COVID-19 outbreak, by severity

Percentage of households with more than usual disputes or disagreements with other family members during the COVID-19 outbreak, by socio-economic characteristics

## Regional distribution, percentage of households

Область	... deterioration in emotional state (mood)	... an adult household member felt depressed, discouraged, or hopeless	...an adult household member experienced difficulty sleeping	...more than usual disputes or disagreements with other family members
<b>National</b>	<b>20,4</b>	<b>17,1</b>	<b>4,4</b>	<b>5,5</b>
Batken	5,9	4,5	4,5	0,3
Djalal-Abad	18,7	13,4	1,1	8,0
Yssyk-Kul	4,4	3,2	1,7	0,9
Naryn	1,9	1,5	0,6	0,2
Osh	23,5	20,0	5,3	4,5
Talas	29,4	22,0	4,6	13,3
Chui	22,4	20,4	5,6	2,2
Bishkek c.	26,9	23,4	5,3	8,4
Osh c.	38,0	32,2	13,1	13,3

### Key messages

- More than 20% of households reported some deterioration in their emotional state (mood) during the COVID-19 outbreak.
- Anxiety, expressed as extreme depression and / or significant difficulty sleeping and / or increased family disagreements and disputes, was reported in one in four households in urban areas and in almost one in six in rural areas.
- Deterioration in emotional state is inherent in the households of the richest quintile (23.6%) and those affected by Covid-19 (26.9%).
- The adult population in households of Naryn (1.9%), Issyk-Kul (4.4%) and Batken (5.9%) regions was least concerned.
- A highest level of anxiety was observed in the city of Osh (38%) and Talas region (29.4%), where, along with extreme depression and significant difficulty sleeping, the highest rates (13.3% in each of them) were observed in terms of increased disagreements and disputes in family.

Data from this snapshot can be found in the Annex 3, in the tables PW1, PW2, PW3, PW4

# Kyrgyzstan 2020

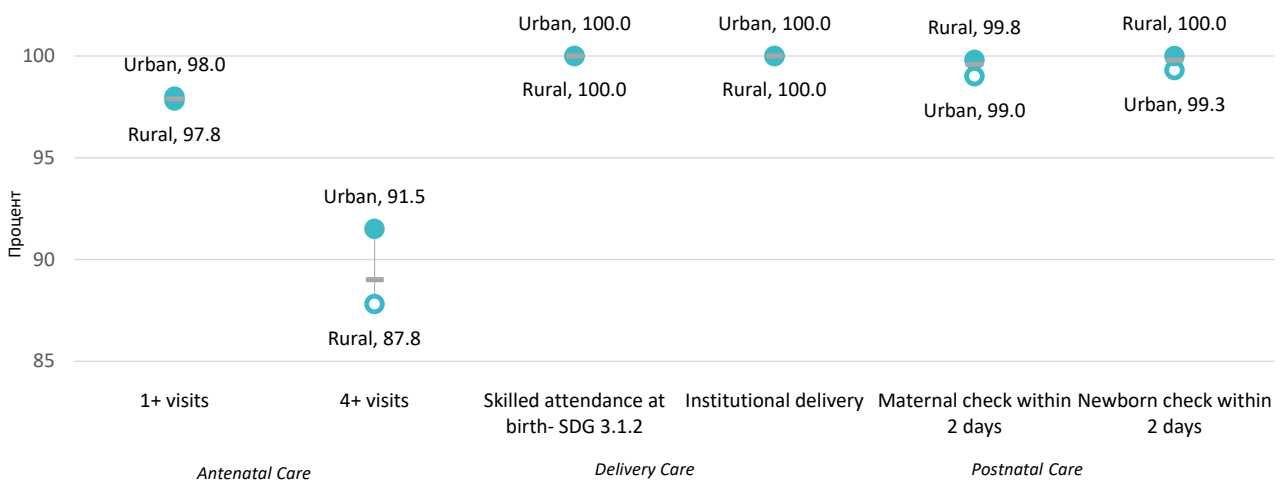

MICS Follow-up Survey on  
Covid-19 impact on children  
and women in Kyrgyzstan

## Maternal & Newborn Health

### Key Elements of Maternal & Newborn Health

#### Maternal & Newborn Health Cascade by Area

Percentage of women age 15-49 years with a live birth in the last year who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel or at least four times by any provider, who were attended by skilled health personnel during their most recent live birth, whose most recent live birth was delivered in a health facility, who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery of their most recent live and percentage of last live births in the last 2 years who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery, by area

#### Timing of First Antenatal Care Visit

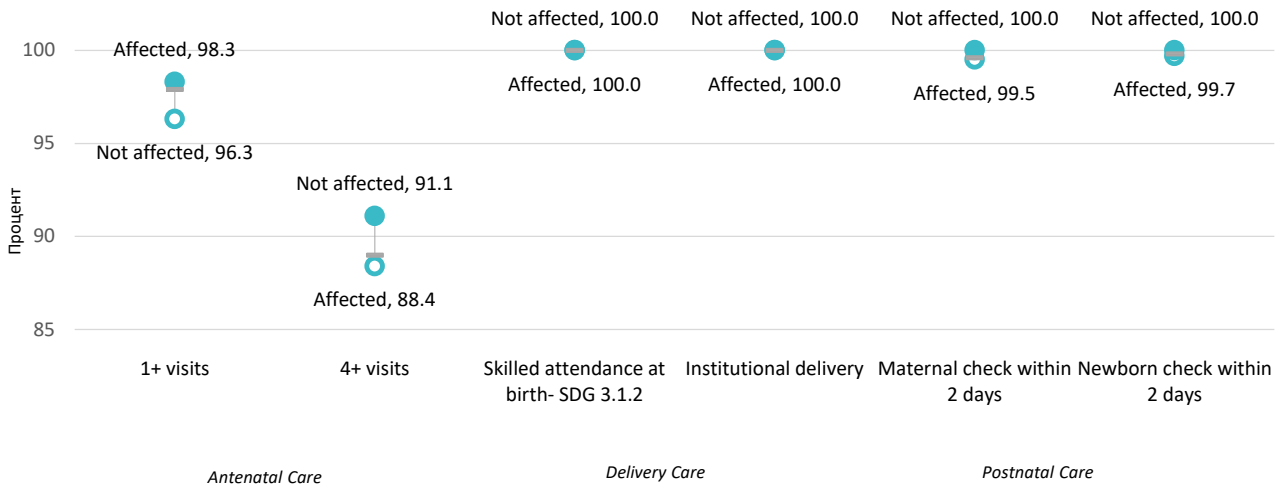

Percentage of women age 15-49 years with a live birth in the last year who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel, by the timing of first ANC visit

#### Content & Coverage of Antenatal Care Services

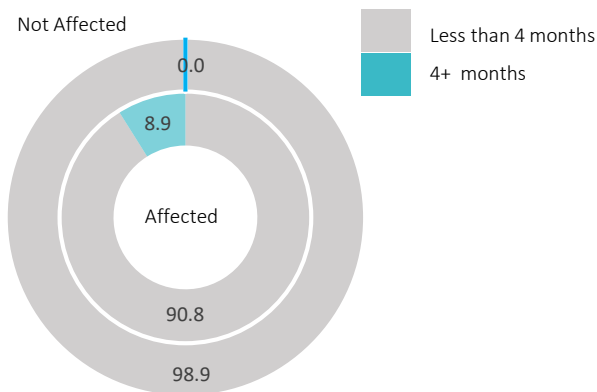

Percentage of women age 15-49 years with a live birth in the last year who had their blood pressure measured and gave urine and blood samples, reported that during an ANC visit they received information or counselling on HIV, and reported that they were offered and accepted an HIV test during antenatal care and received their results during the last pregnancy that led to a live birth

## Maternal & Newborn Health Cascade: Affected by Covid-19 vs Not affected

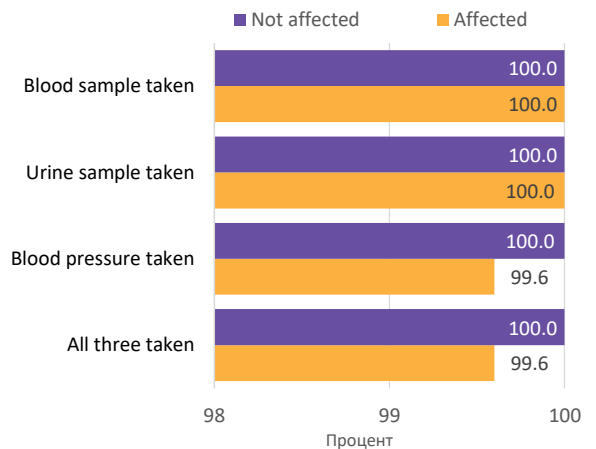

Percentage of women age 15-49 years with a live birth in the last year who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel or at least four times by any provider, who were attended by skilled health personnel during their most recent live birth, whose most recent live birth was delivered in a health facility, who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery of their most recent live and percentage of last live births in the last 2 years who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery, by area

## Timing of First Antenatal Care Visit

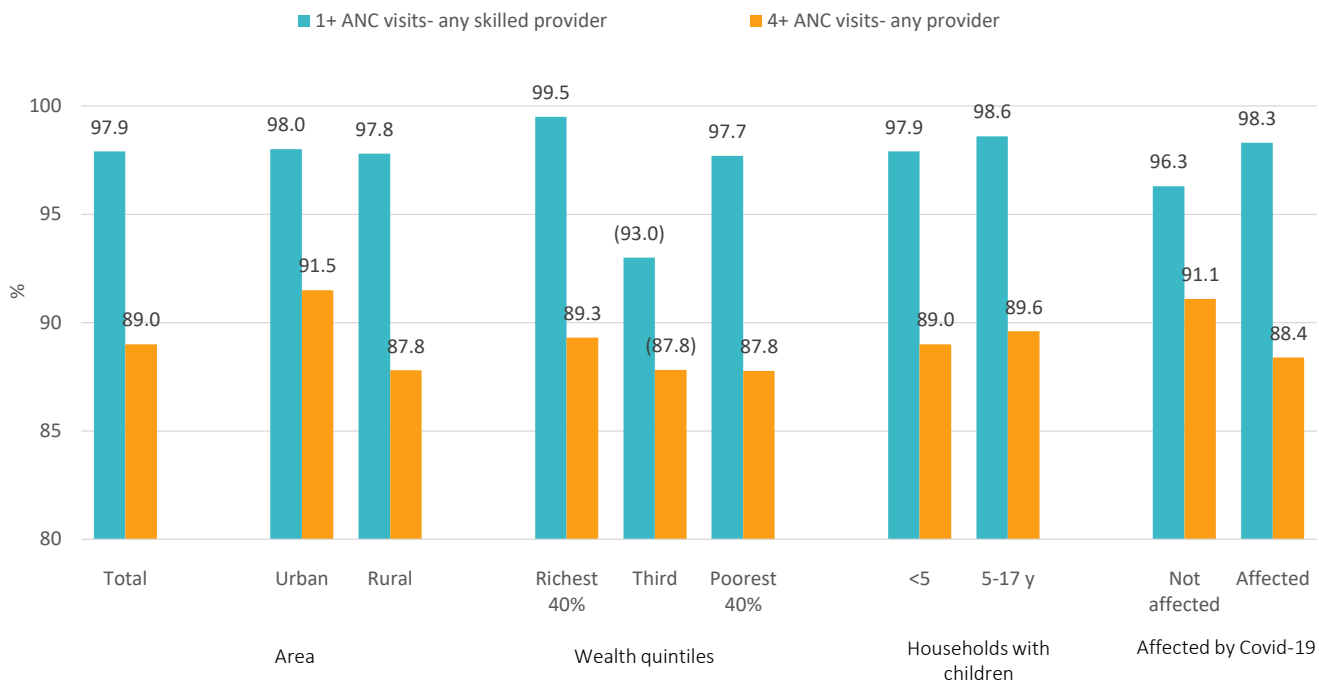

Percentage of women age 15-49 years with a live birth in the last year who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel, by the timing of first ANC visit

## Content & Coverage of Antenatal Care Services

Percentage of women age 15-49 years with a live birth in the last year who had their blood pressure measured and gave urine and blood samples, reported that during an ANC visit they received information or counselling on HIV, and reported that they were offered and accepted an HIV test during antenatal care and received their results during the last pregnancy that led to a live birth

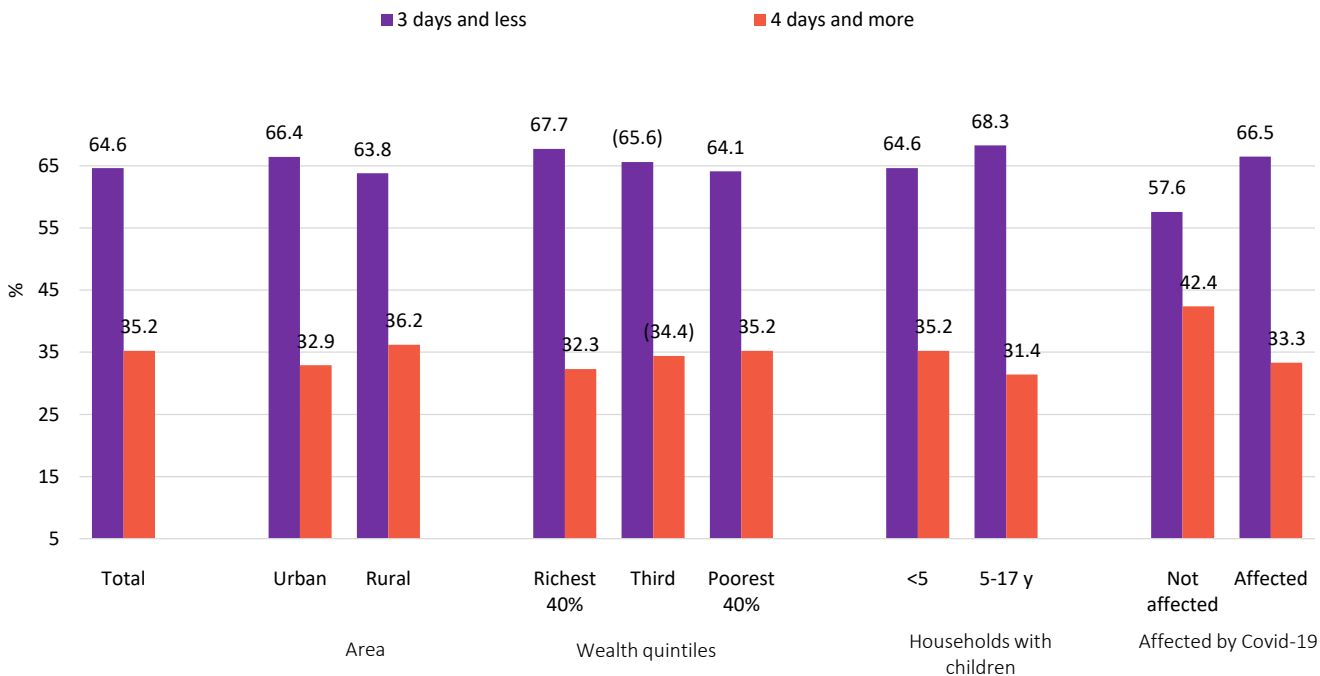

## Coverage of Antenatal Care by Various Characteristics

Percentage of women age 15-49 years with a live birth in the last year who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel or at least four times by any provider

( ) – based on 25-49 unweighted cases.

## Length of stay in a health facility

Percentage of women aged 15-49 who gave birth to a live child in a health facility in the last year, by length of stay in a health facility by socio-economic characteristics.

( ) – based on 25-49 unweighted cases.

## Post-natal health checks for newborns

## Postnatal Care within 2 Days of Birth by Various Characteristics.

Percentage of women age 15-49 years with a live birth in the last year who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery of their most recent live and percentage of last live births in the last 2 years who received a health check while in facility or at home following delivery, or a post-natal care visit within 2 days after delivery, by various characteristics

## Coverage of Newborn Care

Among the last live-birth in the last year, percentage who were dried after birth; percentage who were given skin to skin contact; percentage who were bathed after 24 hours of birth; percentage where the newborn received a least 2 postnatal signal care functions within 2 days after birth; and percentage of women with a live birth in the last 2 years who put their last newborn to the breast within one hour of birth, by various characteristics

## Postnatal Care for Mother

Percentage of women aged 15-49 who gave birth to a live child in the last year and who received postpartum follow-up from any health care provider after discharge from the health facility

## Key messages

- Antenatal care was provided to 100% of women aged 15-49 years who gave birth to a live child in the last year, and in most cases antenatal care is provided by a doctor (about 84%) and more than 16% - by nurses, midwives and paramedics.
- The median number of months of pregnancy at the time of the first antenatal visit was 2.0 months.
- 89% of women had at least four antenatal visits (MICS-2018 - 94.3%), while about 9% had from 1 to 3 visits (MICS-2018 - 5%) and 2% of women were unable to answer / remember.
- 100% of pregnant women who received antenatal care in connection with childbirth in the last year had urine and blood tests taken as part of the antenatal care package (MICS-2018 -99%) and blood pressure was measured in 99.7% of women (MICS- 2018 - 98%).
- 80.8% of births were assisted by qualified doctors (MICS-2018 - 91%), 18.7% - by nurses and midwives (MICS-2018 -8%) and 0.5% by paramedics.
- About 9% of women living in households affected by Covid-19 and having given birth to a live child in the past year were first seen by a qualified health worker with a pregnancy of 4 months or more as part of antenatal care.
- After the birth of a child, about 65% of women in labor were in a medical institution from 12 hours to 4 days. At the same time, after discharge from a medical institution, only 11% of newborns were visited for postpartum observation in the first 2 days and 47% in the first 6 days.
- 99.8% of newborns received at least 2 vital observations in the first 2 days after birth. At the same time, only 80.3% of mothers were informed about the signs of a threat to the baby's health.

Data from this snapshot can be found in the Annex 3, in the tables MN1, MN2, MN3, MN4, MN5, PN1, PN2, PN3, PN4, PN5, PN6, PN7

# Kyrgyzstan 2020

MICS Follow-up Survey on  
Covid-19 impact on children  
and women in Kyrgyzstan

## Infant & Young Child Feeding

### Early Initiation of Breastfeeding

Percentage of live births among women aged 15-49 who have gave birth to live children in the last year who were ever breastfed, who were breastfed in the first hour after birth and in the first 24 hours after birth.

Percentage of newborns breastfed within the first hour of life, by background characteristics

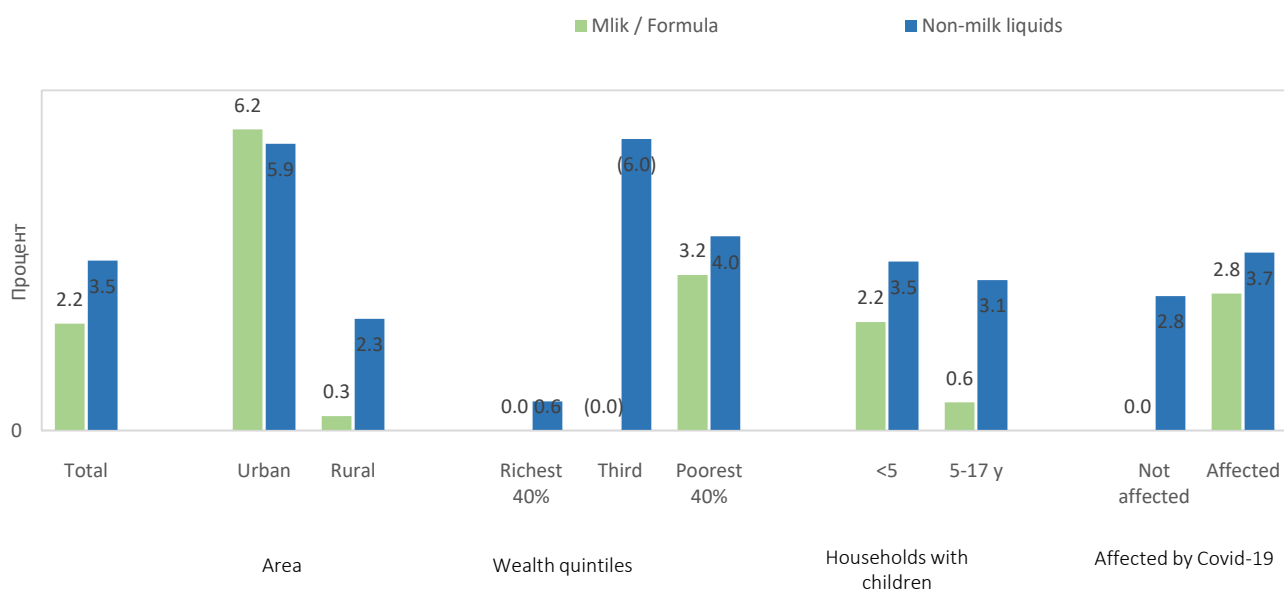

### Complementary liquids (other than breastmilk)

Percentage of last live births among women aged 15-49 who gave birth to live children in the last year, by type of liquid or food (excluding breast milk) consumed in the first 3 days of life.

## Complementary liquids (other than breastmilk)

### Complementary liquids (other than breastmilk), by background characteristics

Percentage of last live births among women aged 15-49 who gave birth to live children in the last year, by type of liquid or food (excluding breast milk) consumed in the first 3 days of life, by background characteristics.

( ) – Figures that are based on 25-49 unweighted cases

## Key messages

- 79.3% of children apply to the breast within the first hour after birth (MICS-2018 - 81%) and 97.8% - on the first day.
- The highest rates of early attachment are found among urban dwellers and in households not affected by Covid-19.
- About 6% of newborns in the first three days of life received any other liquids besides breast milk, in cities - about 13%, in villages - about 3%.
- In the first 3 days of life, in addition to breast milk, newborns consumed only milk-free liquids / products (3.5%), only milk-based liquids (2.2%), infant formula (2.6%), water with sugar and glucose (1.9%).

Data from this snapshot can be found in the Annex 3, in the table MN7

## Early Childhood Development

### Support for Learning

#### Early Stimulation & Responsive Care

Percentage of children age 2-4 years with whom the father, mother or adult household members engaged in activities that promote learning and school readiness during the last three days

Note: Activities include: reading books to the child; telling stories to the child; singing songs to the child; taking the child outside the home; playing with the child; and naming, counting or drawing things with the child

Early childhood, which spans the period up to 8 years of age, is critical for cognitive, social, emotional and physical development. During these years, a child's newly developing brain is highly plastic and responsive to change. Optimal early childhood development requires a stimulating and nurturing environment, access to books and learning materials, interactions with responsive and attentive caregivers, adequate nutrients, access to good quality early childhood education, and safety and protection. All these aspects of the environment contribute to developmental outcomes for children.

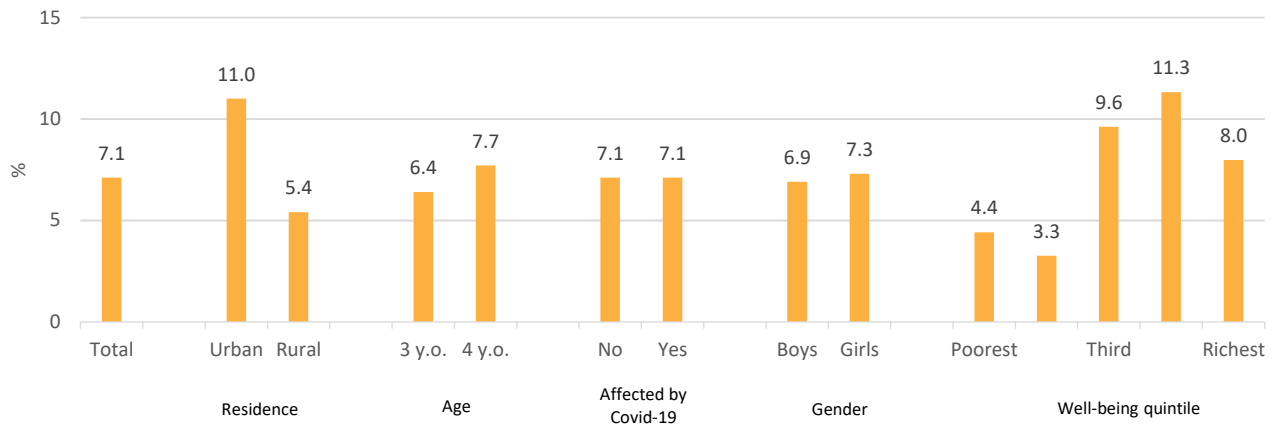

Children facing a broad range of risk factors including poverty; poor health; high levels of family and environmental stress and exposure to violence, abuse, neglect and exploitation; and inadequate care and learning opportunities face inequalities and may fail to reach their developmental potential. Investing in the early years is one of the most critical and cost-effective ways countries can reduce gaps that often place children with low social and economic status at a disadvantage.

#### Average number of activities that adult household members have engaged in with children

Average number of activities that adult household members have engaged in with children in the past three days that facilitate learning and preparation for school, and the involvement of fathers and mothers in this process.

## Attendance at Early Childhood Education Programmes

Percentage of children aged 36-59 months attending an early childhood education programme, by background characteristics

## Learning Materials & Child Supervision

### Access to Play & Learning Materials

Percentage of children under age five according to their access to play and learning materials

### Inadequate supervision of children

Region	Inadequate supervision
<b>National</b>	<b>14,9</b>
Batken	4,2
Jalal-Abad	10,1
Issyk-Kul	4,4
Naryn	1,2
Osh	36,4
Talas	12,2
Chui	8,8
Bishkek c	4,0
Osh c	19,7

Percentage of children under age five left alone or under the supervision of another child younger than 10 years of age for more than one hour at least once in the last week, by region

## Key messages

- Early stimulation and responsive care for children aged 2-4 years is provided mainly by any adult household member (94.7%), but the father's participation (12.6%) was very limited.
- The percentage of children aged 3-4 years participating in early education programs was over 7 percent. However, in urban areas this figure is 11 percent, and in rural areas more than 5 percent.
- Most children under 5 years old have access to toys from the store (92.2%), household items, incl. found on the street (56.8%) and a smaller percentage of children to homemade toys (38.9%). Almost three quarters of families had 2 or more types of toys. Every third family had 3 or more books at home.

#### Attendance Rates & Inequalities

##### School Net Attendance Rates (adjusted)

#### Inequalities in Attendance in Early Childhood Education & Participation in Organized Learning

##### Net Attendance Rate for Early Childhood Education

Percentage of children age 36-59 months who are attending early childhood education

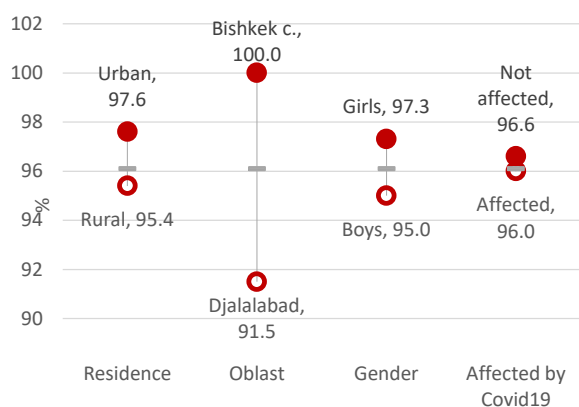

##### Participation Rate in Organized Learning (1 Year Prior to Primary Entry Age)

Percentage of children attending an early childhood education programme, or primary education (adjusted net attendance ratio), who are one year younger than the official primary school entry age at the beginning of the school year

## Inequalities in Attendance Rates

### Adjusted Lower Secondary School Net Attendance Rate

Percentage of children of lower secondary school age (as of the beginning of the current or most recent school year) who are attending lower secondary school or higher

### Adjusted Upper Secondary School Net Attendance Rate

Percentage of children of upper secondary school age (as of the beginning of the current or most recent school year) who are attending upper secondary school or higher

### Regional Data for Net Attendance Rates (adjusted)

Region	Early Childhood Education (3-4 y)	Primary	Lower Secondary	Upper Secondary
National	7,1	98,2	96,1	88,7
Batken	5,0	100,0	97,2	(*)
Jalal-Abad	2,5	96,9	91,5	(*)
Issyk-Kul	13,5	98,2	94,6	92,5
Naryn	5,2	99,6	96,9	(98,0)
Osh	1,5	99,8	96,0	(*)
Talas	2,1	97,3	94,2	(*)
Chui	12,6	98,3	97,9	(*)
Bishkek city	(2,1)	95,2	100,0	(*)
Osh city	32,7	99,5	99,2	(*)

(\*) – estimates are based on less than 25 unweighted cases

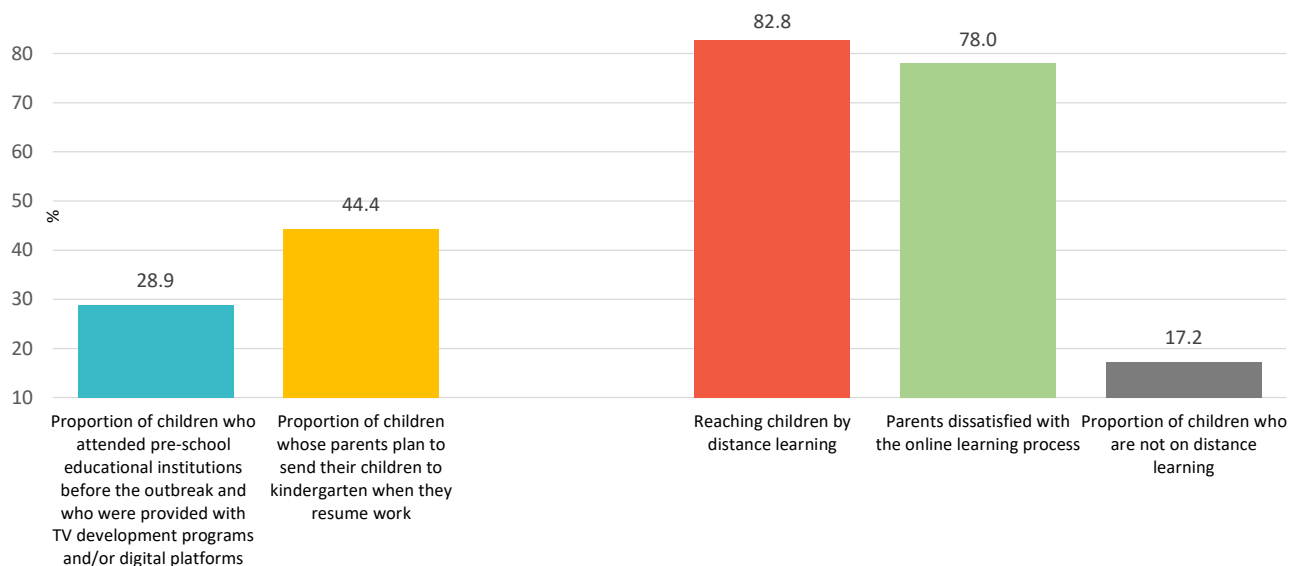

() – based on 25-49 unweighted cases.

## Key Messages

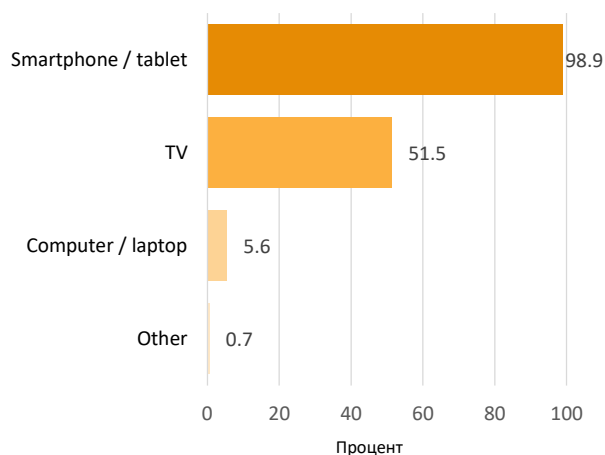

- Education coverage of young children (3-4 years) had decreased dramatically (7%), from 39% in MICS-2018
- The highest education coverage of young children (3-4 years) was noted in Osh (31.7%), extremely low due to lockdowns - in Osh (1.5%), Talas (2.1%) and Jalal-Abad (2, 5%) areas.
- Participation rate in organized education programs (1 year before the age of admission to primary school) remains high - 70%.
- The attendance rates of children in primary (grades 1-4) and basic (grades 5-9) schools are high - 98% and 96%, respectively.
- A decrease in attendance is observed at the level of senior secondary school (grades 10-11) - up to 89%.
- In all regions of the republic there is a high level of attendance in primary and secondary schools, except for the Jalal-Abad (96.9%, 91.5%) and Talas (97.3%, 94.2%) regions.

## Education process during Covid-19 outbreak

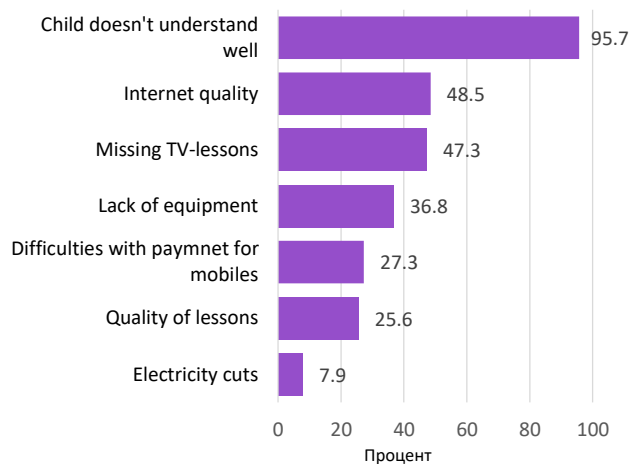

## Equipment used for online educational programmes

Distribution of gadgets used for online education among children aged 7-17 years covered by distance learning programmes

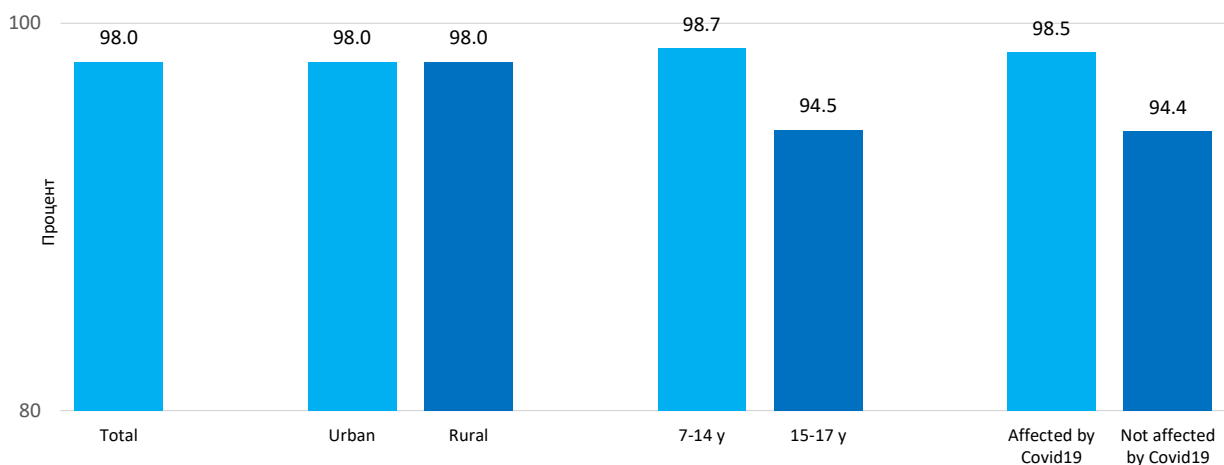

## Reasons for dissatisfaction with the online learning process

Percentage of parents dissatisfied with the online learning process their children are enrolled, by reasons

## Parents' help with school home tasks

### Home tasks prevalence

## Support for completion of home tasks

## Home tasks assessed by teachers

## Regional Data

Region	Distant learning coverage	Dissatisfaction with the online learning process	Children out of online education	Support for completion of home tasks
National	82,8	78,0	17,2	71,8
Batken	58,4	83,0	41,6	70,6
Jalal-Abad	84,8	76,9	15,2	67,6
Issyk-Kul	86,5	73,7	13,5	64,9
Naryn	86,0	97,1	14,0	69,9
Osh	67,7	72,8	32,3	62,9
Talas	81,8	85,4	18,2	68,3
Chui	93,9	77,4	6,1	91,3
Bishkek city	99,1	79,4	0,9	78,3
Osh city	98,6	67,7	1,4	68,6

## Key Messages

- More than 82 percent of children were enrolled in distance learning. For distance learning, a mobile phone / tablet (98.9%) was mainly used. TV broadcasts of educational programs goes the second (51.5%), a computer / laptop (5.6%) and others (0.7%) are quite rare.
- The share of children whose parents are dissatisfied with the online learning process was 78 percent.
- The main reasons for dissatisfaction were that the child did not understand the teaching materials well.
- Almost half of the children did not have a high-quality use of Internet connection and did not always have time to watch TV lessons, a third did not have the opportunity to pay for mobile communications / Internet.
- About 37 percent said there was insufficient equipment.
- The data presented in this section can be found in Tables AE.1., AE.2. and AE.3.

# Kyrgyzstan 2020

## Awareness of children on COVID-19

MICS Follow-up Survey on  
Covid-19 impact on children  
and women in Kyrgyzstan

Awareness measures discussed with children

Inequity in awareness on COVID-19

Regional Data

Region	Children instructed on precaution measures
<b>National</b>	<b>98,4</b>
Batken	98,8
Jalal-Abad	100,0
Issyk-Kul	96,9
Naryn	100,0
Osh	97,0
Talas	97,4
Chui	98,3
Bishkek c	99,4
Osh c	98,9

Percentage of children whose parents have discussed taking precautions with them to reduce the risk of contracting COVID-19

### Key Messages

The proportion of children whose parents discussed with them various precaution measures to reduce the risk of contracting COVID-19 was very high - 98.4 percent. Wearing a mask (88.7%), washing

hands with soap and warm water (93.5%), using a sanitizer (84.2%), covering your mouth and nose with a tissue when coughing and sneezing (61.1%) are the most widespread methods among children, do not touch

your mouth, nose, eyes and face with your hands (67.7%), do not touch, if possible, various surfaces with your hands (68.3%) and other (14.7%).

		<b><sup>d</sup> Indicator PN2 - Post-natal health check for the newborn</b>																											
		<sup>a</sup> Health checks by any health provider (following facility births (before discharge from facility) or following home births (before departure of provider from home)).																											
		<sup>b</sup> Post-natal care visits (PNC) refer to a separate visit by any health provider to check on the health of the newborn and provide preventive care services. PNC visits do not include health checks following birth while in facility or at home (see note <sup>a</sup> above).																											
		<sup>c</sup> Post-natal health checks include any health check performed while in the health facility or at home following birth (see note <sup>a</sup> above), as well as PNC visits (see note <sup>b</sup> above) within two days of delivery.																											
		<sup>d</sup> The same length of stay in the health facility is used for both the mother and the newborn child (since only information on the duration of stay of the mother is collected).																											
		<sup>e</sup> Including women that report time of the first PNC check in weeks.																											
		<sup>f</sup> - Figures that are based on fewer than 25 unweighted cases.																											
		<sup>g</sup> - Figures that are based on 25-49 unweighted cases.

**Indicator PN.2 - Post-natal health check for the newborn**

<sup>a</sup> Health checks by any health provider following facility births (before discharge from facility) or follow home births (before departure of provider from home).  
<sup>b</sup> Post-natal care visits (PNC) refer to a separate visit by any health provider to check on the health of the newborn and provide preventive care services. PNC visits do not include health checks following birth while in facility or at home (see note <sup>a</sup> above).  
<sup>c</sup> Post-natal health checks include any health check performed while in the health facility or at home following birth (see note <sup>a</sup> above), as well as PNC visits (see note <sup>b</sup> above) within two days of delivery.  
<sup>d</sup> The same length of stay in the health facility is used for both the mother and the newborn child (since only information on the duration of stay of the mother is collected).  
<sup>e</sup> Including women that report time of the first PNC check in weeks.  
<sup>f</sup> - Figures that are based on fewer than 25 unweighted cases  
<sup>g</sup> - Figures that are based on 25-49 unweighted cases

**Table PN.3: Post-natal care visits for newborns within the first week following discharge from health facility**

Percent distribution of women age 15-49 years with a live birth in the last year whose most recent live-born child received a post-natal care (PNC) visit within the first week following discharge from the health facility<sup>A</sup>, by location and provider of the first PNC visit, Kyrgyzstan, 2020

	Location of first PNC visit for newborns within the first week following discharge from the health facility				Provider of first PNC visit for newborns within the first week following discharge from the health facility			Number of women with a live birth in the last year whose most recent live-born child had a PNC visit within one week following discharge from the health facility
