2. POPULATION

The **size of population** is evaluated based on the latest census figures with addition of the number of newly born and incoming migrants and deduction of the number of dead and the number of immigrants.

Current status of the number of population for the previous years will be adjusted based on results of next round of population census.

Disaggregation of the population by **rural and urban** is being made by the place of residence, in this population living in areas that are classified by the State as urban (cities, town centers, etc.) is considered urban population. All those who do not reside in urban areas are classified as a rural population.

Size of the resident population of the Kyrgyz Republic had 6 million 257 thousand people in 2018, with comparing 2014 increased by 8,3%.

Table 2.2: Size of the resident population

	2014	2015	2016	2017	2018
Size of the population at the beginning of year, persons	5 776 570	5 895 062	6 019 480	6 140 200	6 256 730
including:					
urban	1 943 579	1 986 740	2 029 557	2 073 939	2 121 035
rural	3 832 991	3 908 322	3 989 923	4 066 261	4 135 695
Of the total population, in percentage					
urban	33,6	33,7	33,7	33,8	33,9
rural	66,4	66,3	66,3	66,2	66,1

The main characteristics of the population is the ration of age groups: younger than working age, working age and older than working age. Age structure of population of the Kyrgyz Republic from demographic point of view is related to the category of young population: as of the beginning of 2018, 33,9 % of total population were children and adolescents¹, 58,6% - working age population² and 7,5% - persons above working age³.

The formation of the age structure of population is influenced significantly by birth rate. Since the 90th of the last century, there has been a change in the natural reproduction of population due to birthrate decrease. A low but stable increase of birthrate has been observed since 2001.

At the beginning 2018, number of children aged 7-10 years and 11-15 years compared to 2014 increased by 81,2 thousand and 33,6 thousand persons, number of children aged 16-17 years fell by 16,7 thousand persons.

3. EDUCATIONAL LEVEL AND ECONOMIC ACTIVITIES OF THE POPULATION

The section provides information on structure of employed population and unemployed aged 15 years and over by economic activity and educational level, from the results of the module “Employment and unemployment” of households survey conducted in 2017. Data on wages of employees of educational sector were taken from official current statistics. (2013 - 2017гг.).

Economically active population - is the part of the population of age appropriate to measure economic activities, which maintains supply of labor for production of goods and services. Economically active population includes people employed in all economic activities, as well as the unemployed

The employed population - are persons performing paid employment job for the remuneration as well as self-employment job, independently or with one or several partners, both involving and without involving hired workers to get profit, family income or performing work without payment in a family enterprise.

Paid employment job – is a work when the person concludes the evident (written or oral) or implied labour agreement to ensure him the basic remuneration (money or in kind) that does not depend directly on income of unit where the person works.

Self-employment job – is a work in own enterprise (in own business) when the remuneration directly depends on income from production of goods and services. The person independently takes a decision related to the activity of enterprise (private business) or delegates these duties leaving for himself the responsibility for the welfare of enterprise (own business).

This group includes:

- Employers;
- Own-account workers;
- Members of producers' cooperatives;
- Unpaid family workers.

Unemployed population related to persons at the age accepted for the calculation of economic activity who have no job in the period under review (income job), search job with the help of employment services or independently and were ready to start it in the near future.

Economically inactive population related to persons who are not employed or unemployed during the period under review.

Level of economic activity of population is the ratio of economically active population to the total number of population of a given age group.

Employment rate is the ratio of employed persons to the total number of population of a given age.

Unemployment rate is the ratio of unemployed persons to the total number of economically active population.

Employed population of the country has a high educational level due to the current educational system: nearly every fifth of employed population has higher and incomplete higher education, every tenth - secondary professional education. Educational level of urban employed population is rather high compared to rural population.

In 2017, share of women in total employed population with higher professional education has

made up 27 %, men – 17 %, secondary specialized, accordingly, 16 % and 7 %. After receiving a general secondary education, girls have a greater desire to continue their education, since the employment opportunities for women without special training are limited. Male employment predominates in types of activity and occupations where there is enough the general secondary or basic general (incomplete secondary) education, but professional training is required.

4. EDUCATIONAL LEVEL AND INCOME OF THE POPULATION

Population income – is income received from employment or self – employment, property, sale, social security transfers and other.

Average per capita monetary income being calculated by dividing total amount of monetary income by the number of resident population.

Household is a group of people who live together, share common income and property (either all or part) and together consume certain types of goods and services, mainly housing and food.

5. STATE BUDGET EXPENDITURES ON EDUCATION

State budget – is a main financial plan for generation and utilization of State funds that represent an estimate of revenues and expenditures of corresponding State bodies and local governments. The State budget combines national and local budgets.

State budget expenditures refer to all sunk payments regardless of the fact whether they are required or gratuitous and for what purposes they are made – current or capital.

Price indices – a relative indicator to measure the change of prices for a specific good, product, service over time i.e. from one period of price registration to another.

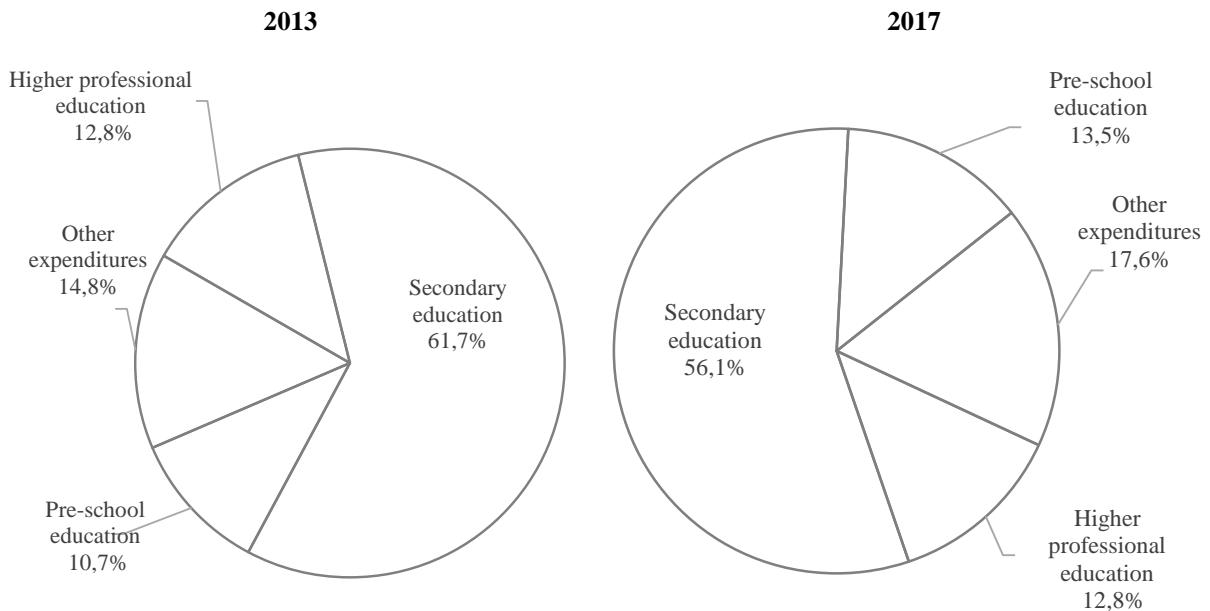

Table 5.1: State budget expenditures on education¹

² Including educational institutions of primary and secondary vocational education, as well as post-secondary vocational education

State budget expenditures on education in 2017 increased by 1,6 times as compared to 2013. Over the last 5 years, the proportion of state budget expenditures on education was rather significant – from 21 to 24 percent. However, in 2017, the proportion of such expenditures, as compared to 2016, had dropped from 24.0 per cent to 22.5 percent, and as compared to 2013, this proportion had dropped by 0,6 percentage points.

The proportion of expenditures on education in GDP had also dropped from 7.6 percent in 2016 to 7.2 percent in 2017, whereas, as compared to 2013, it had increased by 0.3 percent. The largest part of these funds had been allocated to secondary education system - 57 percent, and higher education system – 13 percent.

6. POPULATION COVERAGE BY EDUCATION

Gross enrolment ratio (total enrolment of children in primary, secondary general and higher educational institutions) - is defined as a ratio of the number of students in first, second and third level of education to the total number of resident population aged 7-24. This indicator shows the level of access of the population to education and is used for calculation of the international indicator called "Human Development Index".

Enrolment ratio (total enrolment) - is defined as a ratio of the number of children (regardless of age) enrolled in a certain type of educational level to the total number of children of a corresponding age group specific for a given educational level.

Net enrolment ratio - is defined as a ratio of the number of children in official age group enrolled in certain level of education to the total number of children of a corresponding age group specific for a given educational level.

Enrolment of children in pre-school education - is defined as a ratio of children enrolled in pre-school education institution to the total number of children aged 1-6 based on demographic statistics adjusted to the number of children aged 6 who are enrolled in school education.

The late 90s saw a decrease in enrolment rate of children in pre-school education in most of the regions of the country. The reasons for this development were as follows: closure of pre-school institutions, decrease in family incomes and increase in direct education costs, which had affected primarily children from the disadvantaged families and families living in rural areas. Over the last 5-years period, enrolment rate of children in preschool education has increased by 6 percentage points. In 2017, there were 1390 pre-school education institutions in the country, which are attended by 187.100 children (more than 23 percent of children of the corresponding age). At the same time, enrolment ration of children in pre-school education in urban areas is 2 times higher than that of in rural areas and made up more than 34 percent in 2017.

(percent of the corresponding age group)

	2013/2014	2014/2015	2015/2016	2016/2017	2017/2018
Enrolment ratio in grades 1-11, total	90,2	90,4	93,4	98,4	98,8
boys	89,7	89,9	92,9	97,9	98,3
girls	90,6	90,9	93,8	98,8	99,3
of which:					
1-4 grades¹, total	102,4	101,5	107,3	117,9	117,2
boys	102,8	101,9	107,9	118,3	117,5
girls	102,0	101,1	106,6	117,5	116,8
5-9 grades, total	95,0	95,2	96,2	96,9	97,0
boys	95,0	95,4	96,6	97,3	97,2
girls	94,9	94,9	95,9	96,4	96,7
10-11 grades, total	53,4	54,2	55,2	54,9	54,9
boys	50,2	49,8	50,3	50,1	49,8
girls	56,7	58,7	60,2	59,9	60,1

¹The figures exceed 100% due to the internal migration the population mainly to the capital and other major cities of the country, as well as to the number of students older or younger than the established age of study (7-10 years).

In the 2017/2018 school year, nearly 97 percent of children aged 11-15 years were attending basic secondary general schools (5-9 grades). A low enrolment rate of children in grades 10-11 of general education schools (about 55 percent) is still observed, especially among boys (50 percent). This is due to an increase in the number of adolescents and young adults who seek to gain profession earlier. Some young people prefer to enter primary and secondary vocational education institutions and attend short courses that prepare them for quick entry into the labour market.

¹ The figures exceed 100% due to the internal migration the population mainly to the capital and other major cities of the country, as well as to the number of students older or younger than the established age of study (7-15 years).

7. PRE-SCHOOL EDUCATION

Pre-school educational institution – a general educational institution implementing general education program of pre-school upbringing and education of children aged 6 months to 7 years.

In accordance with their main activity, pre-school institutions are classified into: day nursery, day nursery-kindergarten, kindergarten, school-kindergarten

Capacities of in pre-school institutions (children per 100.00 places) - the ratio of a number of children in pre-school institutions to the total number of places available in these pre-school institutions. The result shall be multiplied by 100.

Children enrolled in pre-school institutions – number of children of pre-school age enrolled in pre-school institutions at the end of year.

Cases of illness among children per 1000 children - the ratio of a number of illness cases to the total number children enrolled in pre-school institutions. The result shall be multiplied by 1000.

In recent years, the number of pre-school institutions had been steadily increasing as a result of measures taken to develop the infrastructure of pre-school institutions and introduce innovative programs for pre-school development.

Recent years have seen an increase in the number of pre-school institutions through opening of community kindergartens by local self-government authorities in selected regions of the country, as well as reconstruction of buildings for pre-school institutions funded by the Aga Khan Foundation and other international organizations.

For the most part, the construction of new school buildings has had little impact on the number of places available in schools or helped to improve teaching conditions. Classes in state schools continue to be held in several shifts and the number of two-shift schools were the most numerous. In 2017, the number of students attending first shift classes represent 60 percent of the total and 38 percent in the second shift.

Teachers play a unique role in implementing the reforms in secondary education system whose number was 8.6 percent more than in 2013. At the beginning of the 2017/2018 school year there were around 80.000 teachers, of which more than 87 percent had higher education, 10 percent - secondary vocational education and 2 percent - incomplete higher education. The number of students per teacher in state schools was 15, urban state schools - 20 and rural state schools - 13. The same figure for private schools was 9 students per teacher. Moreover, this ration is similar across regions and schools with different forms of ownership.

The support of a proper educational level of children at risk and children with developmental problems is implemented in children's homes and boarding schools for orphans and children left without parental care. In 2017, there were 16 family-type houses in the country with 272 children living and studying. Beyond the traditional methods of education and upbringing, the education program of the concerned children also included alternative forms of education, which greatly contributed to a more complete coverage of public education. For several years, the inclusive education of children, which has long been recognized in international practice, has been successfully implemented in the country; inclusion of children with disabilities (with impaired mental or physical development) in the learning process of general education institutions.

Records on the number of children and adolescents aged 7-17 years who were not attending general education schools at the beginning of the 2017/2018 school year

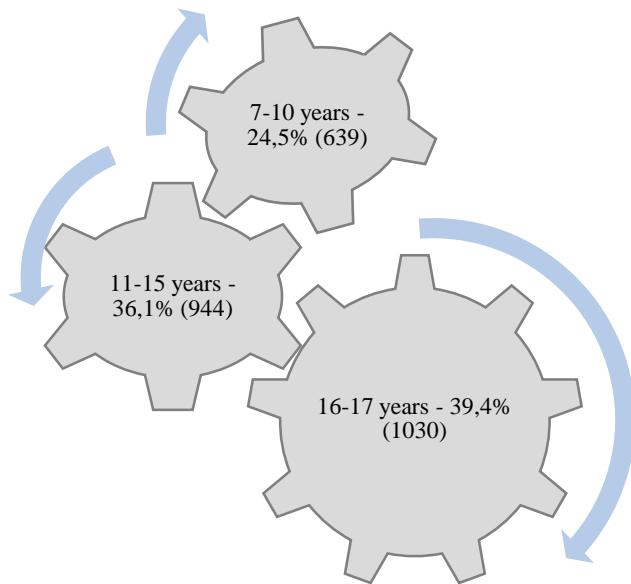

The economic crisis had greatly affected access to education for the disadvantaged population, which has become one of the most pressing problems of social development in recent years. There is a certain proportion of children who do not attend general education institutions.

As of the beginning of the 2017/2018 school year, the number of children who had not attended general education institutions reached 2613 persons, which is 10 percent less than in the 2013/2014 school year (Appendix 1). At the same time, in comparison with the 2015/2016 school year, this number has increased by 17 percent. The largest number of children who have not begun their studies was observed in Osh oblast (42 percent), followed by Issyk-Kul oblast (13 percent), Jalal-Abad oblast (12 percent) and Chui oblast (11 percent).

It is worth noting that most of these children live in rural areas – around 72 percent of the total. Broken down by regions, the figures are as follows: 94 percent in Talas oblast, 87 percent in Chui oblast, 83 percent in Jalal-Abad oblast, and 78 percent in Osh oblast. Of total number of children who have not begun their studies, 56 percent are boys, of which about 40 percent live in Osh oblast (Appendix 1).

The figure shows distribution of children who have not attended school by age. The largest proportion of children not attending school is in the 16-17 age group (40 percent). This age group represents 595 persons aged 17 years (or 58 percent), which makes up 23 percent of the total number of children who have not attended school.

Distribution of number of children who never attended school, by age groups
(at the beginning of 2017/2018 the academic years)

More than 68 per cent of children aged 16-17 years were living in Osh oblast (of which children aged 17 years were 66 percent), 10 per cent in Issyk-Kul oblast (43 percent aged 17 years), 5 percent each in Talas and Chui oblasts (53 and 23 percent aged 17 years – respectively).

Of the total number of children who did not attend school, 1,253 were children with disabilities. Of which, about 69 percent were children with mental disabilities and 26 percent – with physical disabilities. The largest proportion of children with disabilities were recorded in Jalal-Abad oblast (303 children), Naryn oblast (135 children), Osh oblast (193 children) and Chui oblast (181 children).

Children certified by medico-pedagogical boards as not subject to education made up 482, of which 95 children in Batken oblast and 124 children in Chui oblast. The number of such children in rural areas reached 296 (or 61 percent of total children certified as not subject to education).

Analyses of data on children, who have not begun their studies in school, showed that key reasons for non-attendance were financial difficulties of families, increase in families' spending on child's schooling, unwillingness to study among selected adolescents, lack of transport to school from remote areas, as well as seasonal agricultural works. Data on reasons for school non-attendance by children, broken down by regions.

Distribution of children who never attended school, by reason

(at the beginning of 2017/2018 the academic years)

- physical disabilities	328	12,6	235	12,6	71,6
Among children with disabilities those certified by medico-pedagogical boards as not subject to education	482	18,4	296	15,8	61,4

Family circumstances represent the most common reason for school non-attendance (540 children) with nearly 21 percent of total number of children. The largest proportion of children not attending school due to this reason was recorded in Osh oblast (71 percent) and Issykkul oblast (17 percent).

Working children often do not attend school and their number reached 417 (16 percent of total number of children not attending school).

Analyses of data on working children, who do not attend school, showed the following regional differences: 85 percent of children in Osh oblast did not attend school due to this reason, nearly 9 percent in Chui oblast and 5 percent in Talas oblast.

Financial difficulties also represent one of reasons for non-attendance: 246 children (over 9 percent of total number of children not attending school) could not attend school due to lack of shoes, clothes and school supplies. The proportion of such children in Osh oblast made up 53 percent, 35 percent in Issykkul oblast and 12 percent in Naryn oblast. The largest proposition (65 percent) of children not attending school due to financial difficulties live in rural areas.

The most alarming reasons are those such as unwillingness of children to study and reluctance of parents to send their children to school, which were widely common for rural areas. The proportion of children who miss classes due to unwillingness to study made up 35 percent in Issykkul oblast, 26 percent in Talas oblast and 21 percent in Chui oblast Issykkul oblast. The proportion of children who do not attend school due to reluctance of parents to send their children to school made up 76 percent in Osh oblast and 13 percent in Issykkul oblast.

Non-attendance of school by children from the disadvantaged families still remain a pressing problem. Such cases had been recorded in Osh, Issykkul and Chui oblasts. Insignificant number of children (in Naryn oblast) do not attend school because they are engaged in temporary seasonal activities with most of family members performing agricultural works, taking care of livestock etc. Child health problems represent one of the most important reasons for school non-attendance (nearly 2 percent of children not attending school due to this reason). The largest proportion of such children had been recorded in Chui, Naryn, Talas and Batken oblasts.

Despite the fact that, as of the beginning of the 2017/2018 school year, enrolment of children in basic general education (7-15 years) in Kyrgyzstan, according to official figures, reached 100 percent, and insignificant drop-out rates observed primary education (the proportion of children entering first grade and reaching fifth grade – 97.3 percent), non-attendance of school by children is becoming more common.

The results of the 2009 population census showed that the number of illiterate persons aged 15-24 years made up 2957 - 10 percent of total number of illiterate persons - against 7 percent based on results of the 1999 population census. The proportion of persons aged 15-24 years, who have secondary vocational education, had dropped from 4.8 percent to 2.1 percent, and from 53.0 per cent to 51.6 percent for those with secondary general education. The proportion of young people aged 15-24 years with only primary education had increased significantly: from 3.9 percent to 12.2 percent (or 145270 persons against 36091 persons – based on the 1999 population census. (Appendix 3).

Including primary vocational education.

9. PRIMARY VOCATIONAL EDUCATION

General-educational institution of primary vocational education (vocational college or lyceum) is an institution offering vocational education programs aimed at training skilled workers or employees for different fields of economic activities. Training of professional skilled workers/employees is being made on the basis of general education and is combined with obtaining general secondary education. Primary vocational education for certain specialties could be based on general secondary education with shortened term and duration of vocational studies.

10. SECONDARY VOCATIONAL EDUCATION

Secondary vocational educational institution (SVEI) is an institution that offers vocational educational programs of secondary vocational education. Such institutions include specialized colleges and schools, and technical schools (technikums). Secondary vocational educational institutions may have branches, divisions, preparatory courses and other organizational sub-faculties

Number of students of secondary vocational educational institutions per 10000 of population is measured as a share of students as of the beginning of academic year in the total number of resident population as of January 1 of corresponding year.

Number of graduates from secondary vocational educational institutions per 10 000 population is measured as a proportion of graduates in the total average annual number of resident population of a given year.

Table 10.1: Secondary vocational institutions, by regions

11. HIGHER PROFESSIONAL EDUCATION

Educational institution of higher education (higher professional educational institution (HPEI)) is an institution that holds status of a legal entity and offers educational programs of higher education. Higher education is offered in universities, academies, institutes and colleges. Higher educational institutions may have branches, departments, sub-faculties, preparatory courses, scientific and research laboratories, departments of graduate and pos-graduate studies, as well other organizational subunits.

¹ Only parent educational institutions of higher professional education.

Reforms of higher professional education system aimed at optimizing the network of higher educational institutions of the country resulted in a decrease of the number of parent educational institutions, as well as branches and structural sub-divisions. At the same time, in the 2017/2018 academic year, admission of students to higher educational institutions decreased by 14 percent as compared with the 2013/2014 academic year.

¹ Only parent educational institutions of higher professional education.

At the beginning of the 2017/2018 academic year, there were 16 private institutions of higher professional education in the country with about 22.000 students.

Most of higher education institutions are located in Bishkek city (about 64 per cent), which is due to the developed network of state institutions of higher professional education that have the most qualified teaching staff. State-owned **HPEIs** often become founders of such private educational institutions.

The training of specialists was provided by such joint educational organizations as the Kyrgyz-Turkish Lyceum, the Kyrgyz-Turkish University, the Kyrgyz-Uzbek High Technological College, the Kyrgyz-Russian Slavic University, International University of Kyrgyzstan, the Kyrgyz-European and the Oriental faculty on Japanese language under the Kyrgyz State National University. In 1998, the Kyrgyz-American faculty had been transformed into the American University of Central Asia.

In 2017, the number of students who graduated from 8 joint institutions of higher professional education and branches of foreign educational institutions reached 2.800.

Democratic policy orientation in Kyrgyzstan has allowed many neighboring countries to send their young people to study in institutions of vocational and higher professional education of our country. The main reasons for their choices to study in Kyrgyzstan: close location, relatively moderate tuition fee in comparison with European countries and the USA, some linguistic affinity, common culture etc. Foreign students study in medical and technical fields, as well as linguistics.

associate professor	2 301	2 453	2 612	2 147	2 257

The system of higher professional education employs more than 12.000 teachers. Qualification level of teaching staff has a profound impact on the quality of education. In 2017, of the total number of faculty members, 28 percent of teaching staff held candidate of sciences decrees, 6 percent - doctor of sciences degrees, 18 percent were associate professors and 5 percent were professors. There were 13 students per teacher in state institutions of higher professional education and 15 students in private institutions.

To ensure further improvement of quality of education and management of educational processes in the country, a new system for financing state institutions of higher professional education was introduced in 2002, which provides government educational grants to students of state institutions of higher professional education based on the outcome of republic-wide testing. The testing is the only criteria used in awarding government grants and this testing becoming of great importance. The number of students funded from government educational grants reached 6.100 at the beginning of the 2017/2018 academic year and the number of first-year students reached 6.200.

Figure 11.1: Number of higher professional educational institutions and number of students in them, by type of ownership

12. POSTGRADUATE PROFESSIONAL EDUCATION

Postgraduate professional education is an education that provides people the opportunity to improve their educational, scientific, pedagogical qualification on the basis of higher professional education.

Postgraduate professional education implies the implementation of programs for the training of scientific and scientific-pedagogical personnel who have scientific degrees of candidate and doctor of sciences.

Postgraduate and doctorate are the main form of training of scientific and pedagogical personnel in the system of higher professional education leading to advanced scientific qualifications and it represents the opportunity for professionals to improve their educational level, scientific and pedagogical qualification on the basis of higher professional education.

The indicator **admission of postgraduate students** covers all post graduate students admitted to postgraduate study of a given institution including those admitted students who were sent by other institution (target postgraduate study) that are not able to produce scientific and scientific-pedagogical staff on the spot.

Doctoral studies (doctorate) – is a full-time education of scientific-pedagogical staff of high qualification – doctors of science – in the most important fields of science and technology.

Table 12.1: Main indicators of postgraduate activity

	2013	2014	2015	2016	2017
Number of organizations with postgraduate activity, total	43	43	45	46	50
Out of which in:					
Science and research institutions	13	13	12	13	25
Higher professional educational institutions	30	30	33	33	25
Admitted to postgraduate study, persons	579	600	655	773	879
Of which those who are out of job	246	219	241	273	296
Number of postgraduate students (as of the end of the year), persons	2 157	2 082	2 008	2 131	2 413
including those who are out of job	840	780	744	733	785
Postgraduates completed during a year, persons	622	572	565	557	448
including those who defended dissertation	45	44	9	23	19
From total graduates those who study out of job	300	258	197	242	176
including those who defended dissertation	10	5	4	5	5

The number of postgraduates has increased almost by 12 percent in comparison with 2013 and in 2017 has made up 2,4 thsd. people, where the share of women among those who studied in postgraduate has made up 58 percent.

13. SCIENTIFIC POTENTIAL

Volume of **scientific and technical works** comprises scientific researches (scientific and research works) and developments, as well as scientific and technical services.

Scientific researches and developments comprise works undertaken in order to get new scientific knowledge and identify ways of their practical use. They include fundamental, applied researches in all fields of science.

Specialists – researches comprise specialists who are professionally engaged in scientific researches and developments. This category includes administrative and managerial personnel directly managing the research process, as well as postgraduates who are directly involved in scientific research works.

Specialists-technicians comprise workers who participate in scientific researches and developments, perform technical functions, as a rule under the guidance of researchers.

Supplementary personnel are workers who perform auxiliary functions related to scientific and technical works and services.

Table 13.1: Volume of scientific and technical works conducted by scientific organizations of the Scientific and Research Institute and higher professional educational institutions

(thsd. soms)

	2013	2014	2015	2016	2017
Volume of scientific and technical works¹	485 355,1	463 733,2	473 879,2	500 300,9	531 592,9
including:					
scientific and research works	315 189,6	424 283,7	426 800,6	454 666,5	479 555,3
of which fundamental	97 601,5	208 554,1	208 399,5	230 938,1	210 751,0
developments	142 039,4	21 910,3	31 687,4	33 485,2	30 676,5
including:					
design and technological works	137 960,4	21 607,9	25 073,2	23 770,5	22 119,9
development of pre-production models	1 893,6	124,8	3 991,2	9 662,1	7 782,1
designs for construction works	2 185,4	177,6	2 623,0	52,6	774,5
scientific and technical services	28 126,1	17 539,2	15 391,2	12 149,2	19 836,8

Publications released by the National Statistical Committee of the Kyrgyz Republic in 2018

	Periodicity	Date of issue
<i>Complex statistical publications</i>		
Publication «On social and economic situation of the Kyrgyz Republic»	monthly	till 18 th , quarterly – till 20 th after the reporting month
Statistical bulletin «Kyrgyz Republic and regions»	quarterly	3 rd decade of month after the reporting quarter
Brief statistical handbook «Kyrgyzstan»	annual	April
Publication «Kyrgyzstan in figures»	annual	June
Publication «Social tendencies of the Kyrgyz Republic for 2013-2017»	annual	December
Statistical yearbook of the Kyrgyz Republic	annual	December
Publication «Small and medium entrepreneurship in the Kyrgyz Republic for 2013-2017»	annual	September
<i>National Accounts Statistics</i>		
Publication «National accounts of the Kyrgyz Republic for 2013-2017»	annual	December
Publication «Input – Output tables of the Kyrgyz Republic for 2016»	annual	March
<i>Finance Statistics</i>		
Publication «Activity of enterprises with foreign investment in the Kyrgyz Republic for 2013-2017»	annual	September
Statistical bulletin «Formation of the profit of enterprises of a real sector of economy»	annual quarterly	25 June 70 th day after the reporting period
Statistical bulletin «Condition of the mutual debt of enterprises of a real sector of economy»	annual quarterly	25 June 70 th day after the reporting period
Statistical bulletin «Stock of commodities and tangibles of enterprises of a real sector of economy»	annual quarterly	25 June 70 th day after the reporting period
Statistical bulletin «Main indicators of the activity of enterprises of financial sector of economy»	annual quarterly	22 April 50 th day after the reporting period
Publication «Finance of enterprises of the Kyrgyz Republic for 2013-2017»	annual	September
<i>Industry Statistics</i>		
Statistical bulletin «Main economic indicators of industry»	monthly	till 15 th after the reporting period
Statistical bulletin «Main economic indicators of development of the industry of the Kyrgyz Republic in 2017 (according to SO form)»	annual	July
Publication «Industry of the Kyrgyz Republic for 2013-2017»	annual	November
Statistical bulletin «Production of main type of products in kind»	annual	July
<i>Construction and Investment Statistics</i>		
Statistical bulletin «Main indicators of investment and construction activity»	quarterly	till 15 th after the reporting period
Statistical bulletin «Main indicators of investment and construction activity by territory»	quarterly	till 15 th after the reporting period
Statistical bulletin «Main results of annual reports on investment and construction»	annual	September
Publication «Investment in the Kyrgyz Republic for 2013-2017»	annual	September

	Periodicity	Date of issue
<i>Agriculture Statistics</i>		
Statistical bulletin «Production of main type of livestock products by territory of the Kyrgyz Republic»	monthly	9 th day after the reporting period
Statistical bulletin «Briefs on harvest of agricultural crops, sowing of winter crops, fall-ploughing»	from 1 st July till the end of the year	9 th day after the reporting period
Statistical bulletin «On harvest of agricultural crops in 2017»	annual	January
Statistical bulletin «Sown areas of agricultural crops for harvesting in 2017»	annual	July
Publication «Agriculture of the Kyrgyz Republic in 2013-2017»	annual	November
Statistical bulletin «Report on feedstuff production»	annual	December
Statistical bulletin «Results of livestock and poultry accounting as of the beginning of 2017»	annual	March
<i>Consumer Market and Services Statistics</i>		
Statistical bulletin «Main indicators of trade and services»	monthly	till 20 th after the reporting period
Publication «Consumer market of the Kyrgyz Republic in 2013-2017»	annual	September
Publication «Tourism in Kyrgyzstan»	annual	July
Publication «Information and Communication Technologies in the Kyrgyz Republic»	annual	October
<i>Price Statistics</i>		
Statistical bulletin «Consumer Price Indices for goods and services by Kyrgyz Republic»	monthly	12 th day after the reporting period
Publication «Prices in the Kyrgyz Republic»	annual quarterly	March 45 th day after the reporting period
Statistical bulletin «Producer prices for the main type of industrial products in selected CIS countries»	quarterly	30 th day after the reporting period
<i>Labour and Employment Statistics</i>		
Statistical bulletin «Results of annual reports on employees and wages/salaries»	annual	September
«Employment and unemployment»	annual	October
Results of integrated survey of household budgets and labour force in 2017		
<i>Sampling Survey Statistics</i>		
Information bulletin of the Kyrgyz Republic on food security and poverty	quarterly	50th day after the reporting period
Publication «Living standard of population of the Kyrgyz Republic in 2013-2017»	annual	November
<i>External Trade Statistics</i>		
Publication «External trade of the Kyrgyz Republic in 2013-2017»	annual	October
<i>Demographic Statistics</i>		
Publication «Demographic yearbook of the Kyrgyz Republic in 2013-2017»	annual	September
<i>Social Statistics</i>		
Publication «Women and men of the Kyrgyz Republic»	annual	November
<i>Environment Statistics</i>		
Statistical bulletin «Environment»	annual	August
Publication «Environment in the Kyrgyz Republic»	annual	October
